Photo studio light box

Our editors independently research, test and recommend the best products; you can read more about the review process [here](#). We may receive a commission on purchases made from selected links. If you regularly photograph small and medium-sized products, there is no better way to get consistent photos than as one of the best light boxes. These cheap tools are a fantastic way to get soft, diffuse lighting on the subject, preventing dark spots and rough shadows. In addition to the overall size of the lightbox, which determines the size of the rotating elements, there are a few factors to keep in mind. Unless you have a separate photo studio or storage space, consider the portability of a light box and how easy it is to set it up or break it down. Also, certain lightboxes come packed with a variety of accessories, such as additional charging and backlighting, as well as different color backgrounds. Check out the best photo light boxes below: We like robust construction with multiple scaling options available in extremely accurate colors, which you wouldn't like with Havox's Photo Studio lightboxes are undoubtedly expensive, but you get a lot for your money. Available in three different sizes — 16, 24, and 32 — each box has one top and three foreground openings, maximizing shooting options while keeping external reflections as small as possible. Boasting particularly accurate colors (CRI 93+) compared to a near-sunlight 5,500 Kelvin, the adjustable diffuser at the top of the box softens and spreads light

to minimize shadows. All three lightbox sizes also come with an XD version that doubles the LEDs inside and hence the light output. Whichever version you get, the brightness controls on your power supply allow you to adjust the brightness as needed. Assembly and demolition is relatively simple, taking 10-15 minutes, and the construction of the unit is noticeably more stable than most cheaper competition. Throw in a compact carrying case and have a high-quality light box that's portable enough to move as needed and deliver excellent results. What we love about USB lighting is easy to transport, which we don't like is just 9cc recording space If you know you only need to take shots of small items and don't have a big budget to spend, the JHS-TECH portable lightbox is a great place to start. At nine cubic centimeters, it's ideal for shooting images of jewelry or toys, and it folds down to fit into a bag or backpack for easy transportation. Open first, you can choose to shoot straight, or take top down shots through a large hole in the roof of the box that will cover you if you don't use it. The strip of LED lights on the front and back of the box is quite bright and can be controlled separately if necessary. They are powered via a USB cable, which can be connected to a computer, wall socket or portable Connect. What we like at reasonable prices include LED lights What we don't like is no carrying case carrying case lamps Maybe not suitable for larger items looking for an all-in-one lightbox kit that has everything you need to start at a reasonable price? It's hard to get over Fovitec StudioPRO. As well as the lightbox, the wide range of accessories in the box includes four colorful backgrounds, two height adjustable lamps with 45W fluorescent lamps, and small black and white reflective table tops with magnetic legs placing products if needed. The dual lamp setting allows you to light elements from any angle (you can add extra lights if you need them, of course), and because wall, they are both brighter and more flexible than the USB-powered strip lights you'll find on other models. Ideal for shooting small and medium-sized items, the lightbox takes shape and can be set in seconds. When completed, the light box and all other accessories except the lamps pack away in a compact carrying case. What, like the Easy Create App allows 360 degree photography what We Don't Like It feels a little weak as larger models Need a very portable lightbox for shooting product shots on the go? Crowdfunded Foldio3 is ideal as its unique design allows you to drive down just an inch high while expanding to a full-size 25 lightbox to take photos even of relatively large objects. Assembly and disassembly only take a few seconds, as magnets speed up the process. Attaching one of the two backgrounds is equally fast, rolling from bottom to top to lock it to the top. Foldio3 has three LED light strips built in, and if you need extra light or a personalized space, the optional Halo band connects to one of the side or bottom magnets. The control unit allows the lights to be dimmed together or separately. If you're planning 360 photos, add Foldio360. This turntable is located inside the lightbox and connects to your phone or camera via Bluetooth. After automatically rotating and shooting photos, you merge them into a 360-degree photo in the included app. What we love about seamless curved background flexibility is the shooting angles of What We Don't Like Hard Plastics can't fold if you're a professional product photographer or have aspirations to become one, you might want to spending a bit in the MyStudio range. The company sells a few different versions of the lightbox kits, ranging in size up to 53, but by shooting small and medium-sized batteries, the MS20PRO-LED is ideal. This Pro version of the MS20 replaces the basic fluorescent lamps with a pair of ultra-bright color-corrected LED lights, giving much better results. There are also two pairs of bounce/fill cards on their stands to help you manage shadows and illumination exactly where you want. Made of hard plastic instead of fabric, the 20 x 20 x 12 cylindrical background ensures that no wrinkles or seams appear in the shots, and larger shooting angles and less time then as a result. The kit also includes ships and white acrylic pads are becoming professional-looking reflections during what you are shooting. Final Verdict The Havox photo studio delivers unparalleled color accuracy and different sizes and shooting options, making it the best choice for those who need reliable, consistent lighting in photography. Size - The lightbox uses a closed environment to effectively diffuse light under the theme. Therefore, a larger theme requires a larger light box. If you are shooting jewelry, an 18 inch box should be sufficient, while someone shooting on desktop computers may need a 48.00. Accessories - If you need a little more flexibility in lighting settings, some light boxes are packed with different accessories to fine-tune lighting environments such as different backgrounds or additional lighting. Portability - Much of this is related to the size of the light box you choose, and whether there is a separate space for photography, but a light box that makes it easier to set up and demolish gives you more flexibility where you can stage your photos. David Dean has worked in corporate IT for 15 years in various support and leadership roles in the UK, Australia and New Zealand. His work has also appeared in The New York Times, Chicago Tribune, and other major publications. Hillary Grigonis/Digital TrendsLighting's scars make product photography easy, but do you really need to spend \$150 just to shoot your Beanie Baby, just sell for \$20 on eBay? If you have ten minutes and about \$5, you can mimic the effect and get Amazon-worthy product photos to bump up the chances of selling that item (who knows, perhaps, whether Beanie Baby will sell the \$22 better pictures). Here's how. What you'll need while some lightweight mantras require hard-to-find materials like Tyvek, everything for this fast DIY can be added to a grocery store and chances are good enough that there are already some to be lying around. For this project, you will need: Tin foil Foam board or a large piece of cardboard Ribbon White poster board Window table camera (yes, the smartphone counts) Stand (optional) How to make a quick DIY lightweight tent Light tents usually accompanied by a pair of lights, which is one of the reasons why it is so expensive. A quick way to reduce costs is to use a light source that everyone has access to: a window. Technically, it doesn't create a real light tent, but mimics the effect in much less time than other, more complex DIY light tents. Most light tents, however, use two lamps, one each on each side. On one side with a window, a quick DIY reflector fills the shadows on the other side. Take a piece of foam plank or a large, strong piece of cardboard and wrap it in tin foil. You can wrap it completely or just cover an entire site. Use a small scotch tape if necessary to disintegrate the DIY reflector. Then select the window wisely. Avoid that create square light the carpet - you want soft, even lighting to avoid strange shadows. The north or south facing window will work at any time of the day, but if you only have east-west options, simply shoot when the sun is on the opposite side of the building. Bring a table to the window so that you can place the product you want to shoot right next to the window. On a seamless white background, strip up a piece of poster board so that the paper covering some tables and fills some background with the window on one side. You can use any random household items you have at hand – I use a laundry basket. Hillary Grigonis/Digital Trends Hillary Grigonis/Digital Trends If the object you're photographing is large, poster board won't be enough to cover the whole picture. White sheets or a few feet of white fabric in a craft shop can do the trick of larger objects. On the other side of the white poster board, place the tin foil covered structure so that it is parallel to the window, tin foil on the side towards the window. The reflective quality of the tin foil bounces back from part of the window light, making it look like it used two lamps. Place the product between the window and the DIY reflector on the white poster board — and you're ready for photos now. If you have a tripod, set it up to help prevent camera shake while shooting. On the stand, I could shoot with a low ISO and still shake-free images, but if I don't have a tripod, simply turn the ISO up and, if possible, prop your elbows up to the table to steady your hands. I used aperture priority mode for my DSLR set to f/3 with an ISO 250 to get the following shots: Hillary Grigonis/Digital Trends Hillary Grigonis/Digital Trends Hillary Grigonis/Digital Trends Of course buying a DSLR can exceed that \$5 project estimate. While it would be a good idea for those looking for an Etsy or eBay business to invest in a good camera, there's nothing wrong with using your smartphone to shoot some photos to clean up your garage with some eBay listings. I took these pictures from an iPhone 7, a Lightroom app in order to shoot the DNG file: Hillary Grigonis/Digital Trends Hillary Grigonis/Digital Trends Hillary Grigonis/Digital Trends After the shoot, a quick edit will help polish your look - use whatever photo editing program you have - even the most free options will do the trick. I used Lightroom on my desktop with a Creative Cloud subscription, but the smartphone version is free to use. Since I didn't use the actual white background, I tweaked the white balance and bumped up the exposure a bit, so the background became pure white. Overall, this DIY setup took about ten minutes to prepare (except in fact shooting and editing the image), and I spent around \$2 on poster board and dug out a roll of tin foil I already had in the kitchen. The lightweight tent helps to soften the shadows to create flattering light in the detailed Photo. Although this DIY solution does not allow you to shoot 1 a.m. in the basement and is not so portable, window light use is an inexpensive way to get professional-looking results without investing in professional-looking equipment. Tin foil and laundry baskets don't look so classy, but in the photo shoot, what's behind the scenes stays behind the scenes, right? Editors' recommendations
